Exhaust status:

- Check that the Exhaust Duct installation is complete and fan is operational
(This requires the fan to be tested and draft available at the mouth of the oven)
- Check Spray Filter water is connected and operational
(This requires a 15 mm mains water supply fully connected)
- Check Spray Filter 40mm Drain is connected and draining to tundish at floor
(this requires a copper or heat resistant pipe where it contacts the oven shell)

Gas status:

- Check Gas supply is connected to control cabinet and supply is ready for use
(this requires a minimum 19 mm connection to all inlets)

Electrical status:

- Check that a power supply is available for control box and will power up the box.
- Ensure power is connected to spray filter solenoid.
(best to be interlocked with fan - when fan is on, solenoid is on)
(Power (Live) = Brown Neutral = Blue Earth = Green)

Other:

- Check that the area below the oven is well ventilated and has access
(requires a suitably sized vented manhole for service access)
- Check that the area above the oven is well ventilated and accessible
(requires a suitably sized vented manhole for service access)
